

High Efficiency Air Purifier

Model : RA488 SIZE: 460L x 230W x 620H mm

RA488 High Efficiency Air Purifier

Only 9 mins
to clean up
the entire indoor area#,
also fulfil the
international standard
"5 air changes per hour"

**Free door-to-door
filter replacement
service***
in every 12 months
during the contract

Assumption: 20 m² if ceiling height is 2.4 m
at cleaning rate of one air change for particulate

* For more details, please contact our sales consultant

REDUCE

PM2.5

Pollens

Strong
Filtration

APP
CONTROL

7-STAGE PURIFICATION

1 | Pre-filter

Filter dust, dander, pollen, floating debris and other particles larger than 5 microns.

4 | Antibacterial cotton filter

Destroy cell wall of bacteria, rupture and the cell membrane without leakage, terminate the process of microbial metabolism and growth.

7 | Anion generator

Combine indoor dust, smoke and bacteria, which usually have positive charges together and lose the ability to float freely in the air, hence, purifying the air.

2 | Cold catalyst filter

Remove formaldehyde, benzene, xylene, TVOC and other harmful gases through catalytic reaction but does not produce secondary pollution.

5 | H13 HEPA filter

Filter dust, pollens, virus, mold, germs, pet dander and particles larger than 0.3 microns with a high efficiency of 99.97%.

3 | Activated carbon filter

Absorb all kinds of harmful gases such as formaldehyde, toluene, xylene and ammonia.

6 | UV light sterilization

Break down the DNA strands of bacteria, causing the crosslinking of nucleic acid and protein to break up, killing off nucleic acid's biological activity and causing bacterial death.

Volatile Organic Compounds (VOCs)

Furnitures, paints, smoke, adhesives and pressed wood products may release a variety of gases which are harmful to human health, including acetaldehyde, benzene, toluene, xylene, ethylbenzene, styrene, etc. One of the gases - formaldehyde has been identified as a carcinogenic and teratogenic substance by WHO, release period up to 3-15 years
